Interval Minder Now Available

*iPhone App Is Cost-Effective Interval Timer for Educators, Behavior Analysts, and Psychologists*

(Hudson, NH) October 13, 2011 – Notchland Labs, LLC, has released its latest application for the iPhone, iPod Touch and iPad—the Interval Minder. Interval Minder is designed for use by Educators, Behavior Analysts, Psychologists, and other professionals who regularly engage in data collection and/or intervention implementation. The Interval Minder is a cost-effective interval timer that when set will alert the user continuously for a fixed or variable time interval. Users may choose one or a combination of Alert Types: screen flash, vibrate, and tone. Interval Minder is the only iPhone timer app on the market with variable / random looping functionality, which is ideal for scientific data collection.

Educators may use the tool to remind themselves to provide attention/praise to student(s) at pre-determined, regular intervals. Behavior Analysts, Psychologists, and other professionals who collect data on human behavior may use Interval Minder for Interval data collection, Partial-interval data collection, and Time-sampling data collection. Individuals will also find Interval Minder very valuable. Parents may use it to remind themselves to provide positive feedback to children at regular intervals. Individuals may use it to help support therapy goals and self-monitoring goals. Employees may use it to remind themselves to take motor breaks when working long hours at a desk.

To download Interval Minder, visit the Apple App Store. To find out about other Notchland Labs applications, go to www.notchlandlabs.com.
